VIT BHOPAL UNIVERSITY

DIGITAL LITERACY PROJECT REPORT

NAME : SHREYA

REGISTRATION NUMBER : 25BAI10326

COURSE TITLE : DIGITAL LITERACY

COURSE CODE : CSE0001

BRANCH : B.Tech CSE AI ML

DATE OF SUBMISSION : 27-03-2026

INTRODUCTION

Digital literacy is the ability to use digital tools, platforms, and technologies effectively and responsibly. In today's world, it is essential for students to understand how to communicate professionally, use online platforms, and stay safe on the internet.

In this project, I acted as a Student Digital Ambassador and completed five tasks related to digital literacy. These tasks helped me explore various platforms, improve my online presence, and understand cyber safety. The project also gave me practical exposure to tools like GitHub, LinkedIn, and Google Forms.

Task 1: Digital Literacy Awareness Infographic

For this task, I created an infographic using Canva. The infographic explains the concept of digital literacy and highlights its importance for students. It includes topics such as safe internet practices, useful digital tools for students, and maintaining a professional online presence.

While designing the infographic, I focused on making it visually appealing and easy to understand. I used icons, colours, and short text to present the information clearly. One challenge I faced was selecting the right design and layout, but Canva templates made it easier.

This task helped me improve my creativity and taught me how to present information in a simple and engaging way.

Task 2: Digital Portfolio

In this task, I created profiles on GitHub, LinkedIn and Kaggle. These platforms are important for students as they help build a professional identity online.

GitHub is used to store and showcase coding projects. LinkedIn is a professional networking platform where students can connect with industry professionals. Kaggle is used for data science and machine learning practice.

I updated my profiles with basic details like name, branch, and education. In the future, I plan to use these platforms to upload my projects, connect with professionals and participate in competitions.

This task helped me understand the importance of building a digital presence early in my career.

Task 3: Coding and Collaboration Platforms

For this task, I solved a beginner-level problem on HackerRank. This helped me understand how coding platforms work and how I can improve my programming skills.

I also created a Google Form consisting of 5 questions related to digital literacy. The form included both multiple-choice and short-answer questions. I linked the form to a Google Sheet to collect responses.

This task showed me how online platforms can be used for learning, practice, and collaboration. It also helped me understand how to created quizzes and collect data easily.

Task 4: Email Etiquette & Social Media Guidelines

In this task, I wrote two professional emails. One email was to a professor requesting an assignment deadline extension, and the other was to a company expressing interest in an internship. Both emails included interest in an internship. Both emails included proper subject lines, greetings, and professional tone.

I also created a checklist of Do's and Don'ts for responsible social media usage. These guidelines help students maintain a positive digital image and avoid misuse of social platforms.

Poor communication can create misunderstandings. For example, sending an email without a proper subject or greeting may appear unprofessional. This task helped me understand the importance of clear and respectful communication.

Task 5: Cybercrime Awareness

Case Study: Phishing

Phishing is a type of cybercrime where attackers try to steal sensitive information such as passwords, bank details, or personal data by pretending to be a trusted source. It usually happens through fake emails, messages, or websites.

For example, a student may receive an email that appears to be from their bank, asking them to click a link and update their account details. The link leads to a fake website that looks real. Once the student enters their information, the attacker gains access to their account.

Phishing attacks often target students and working professionals because they may not always verify links carefully. The consequences can include financial loss and identity theft.

Prevention Tips

- Never click on suspicious links
- Always check website URLs carefully
- Do not share OTP or passwords
- Enable two-factor authentication
- Use strong passwords
- Avoid public Wi-Fi for transactions
- Verify emails before responding
- Report cybercrime on cybercrime.gov.in or call 1930

Reflection

While researching cybercrime, I was surprised to learn how easily people fall into phishing traps. Even a small mistake can lead to serious consequences. I will be more careful while clicking links and sharing personal information online.

CONCLUSION

This project helped me understand the importance of digital literacy in everyday life. I learned how to use different online platforms, communicate professionally, and stay safe on the internet.

It also improved my technical and communication skills. I will continue to use these tools and follow safe digital practices in the future.
